
The SketchUp Instant Road Pro Plugintorrent is a software program released by Google on March 20, 2014. It enables the people to create, edit, and catalog models of roads in SketchUp without having to invest too many hours into building them one by one. The software is considered very simple-to-use that even novices can use it without having any prior knowledge of what roads are or how they are built. Additionally, it has all of the necessary preconfigured settings which enable users to quickly achieve their desired result with minimal errors. The tool also has both online and offline versions so it can be accessed from any location regardless of available internet connection. SketchUp Instant Road Pro Plugintorrent can be downloaded onto PCs, Macs, iPads, and iPhones.

The SketchUp Instant Road Pro Plugintorrent is now only available for Windows users. The latest version of the plug-in is now Sketchup 9.1 (64-bit). The following table describes the different methods available to use this plug-in. The SketchUp Instant Road Pro Plugintorrent gives users two ways to customize their roads. Users can either select the default road style or customize it manually. They are then prompted to choose either Mountain, Straight, or Curved road styles that are available for customization. The default road style is the maximum level of detail that is available in this plug-in. The higher level of detail, the more accurate the results but also takes longer to render. The lower levels of detail and faster rendering enable users to quickly preview their designs and make improvements as needed without having to wait for a very long time. This plug-in is capable of creating up to three road levels, or passes, in SketchUp. The first pass is the base level which remains unchanged after rendering. It is usually the most important level because it contains all of the layout for constructing your road. The second pass can be altered in any way that users want using the following tools:

The rendering tool in SketchUp cannot handle multiple levels of roads at once so it requires that each one be published separately in order to follow this step. One final step in publishing your road model would be to change its material setting so it will show up appropriately on a Google Earth view. The SketchUp Instant Road Pro Plugintorrent is one of the most simple-to-use and user-friendly ways to create and manage road models. Although the software cannot handle complex maps or facades, this plug-in is a great alternative for people who are just beginning to learn about SketchUp. It also makes an excellent intermediate tool because it eliminates many of the manual steps that can be tedious to people who are just learning.

SketchUp Instant Road Pro Plugintorrent is now available for Windows users only. The latest version of the plug-in is now Sketchup 9.1 (64-bit).
